Description	Funding directly from the Government (including Federal, State or Local) or a Non-Profit for research, training, or career project or other sponsored activity	An award issued by an entity of any type for research or other sponsored activity where the funding originates with the Federal Government or a Non-Profit. Funding follows a flow-down structure: for example •Gov - Academic - WU •Gov - Industry - WU •Non-Profit - Academic - WU	An agreement directly with the Federal Government providing funding for research or other sponsored activity which contains Federal Acquisition Regulation or "FAR" clauses and provides for robust compliance and reporting requirements. This is considered a procurement contract by the government.	An agreement directly with a for-profit company providing funding for a pre-clinical or non-clinical research project (in other words, it is not a Clinical Trial). Usually fixed price, and milestone oriented, with some IP rights going back to the company.	An agreement covering an unfunded collaboration where both WU and the other party are contributing to the performance of a research scope of work. Can be with a for-profit, non-profit or academic entity. Generally contains publication and IP terms.	An agreement directly with a for-profit company providing funding for a Clinical Trial Can be for a Sponsor-Initiated or Investigator-Initial Clinical Trial. CCS Contracts also handles incoming & outgoing subcontracts issued under an industry CTA. For example: •Industry - WU - Academic •Industry - Academic - WU	An agreement to provide services involving human subjects. Services are generally a standardized process not involving a meaningful intellectual contribution by the PI. Service Recipient will own all IP and Results	An agreement to provide services which does NOT involve human subjects. Services are generally a standardized process not involving a meaningful intellectual contribution by the PI. Generally publication is not allowed unless the service is in support of a clinical trial. Service Recipient will own all IP and Results	A contract to allow for the transfer of tangible materials between two organizations, when the recipient intends to use it for their own research purposes. MTAs should only be used when the sole purpose of the agreement is the transfer of material.	An agreement to license existing WU technology, software or materials to for-profit entities.	An Agreement to transfer a Limited Data Set (LDS) (as defined by HIPAA). This agreement satisfies the HIPAA requirements when there is no informed consent allowing for the transfer of the LDS.	An agreement to obtain or access data from a databank (e.g.: National Death Index; Interuniversity Consortium for Policy and Social Research). Agreement generally limits use of the data to a specific research project. Not associated with HIPAA compliance.	Funds or goods that are given voluntarily to WU with no reciprocal obligations. May be restricted to a specific purpose or unrestricted.	An agreement with another entity of any type to discuss a potential future relationship (e.g. a future research agreement, clinical trial, or technology license) which allows for the sharing of confidential information by one or both parties.	A written plan showing the anticipated purchases from eligible small and minority, woman, or veteran owned businesses required in FAR contracts and FAR subcontracts over \$650,000. Sometimes it is due at the proposal stage and sometimes due at the award stage.
